The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1,6,14,17,22-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Menashi '939 or Bruno '674.

Menashi or Bruno each teach or at least suggest the instantly claimed product having the instantly claimed characteristics. See Table IX, cols. 19-20 of Menashi; cols. 2,14 of Bruno.

Any difference imparted by the product by process limitations would have been obvious to one having ordinary skill in the art at the time the invention was made because where the examiner has found a substantially similar product as in the applied prior art the burden of proof is shifted to the applicant to establish that their product is patentably distinct not the examiner to show the same process of making, In re Brown, 173 USPQ 685, In re Fessmann, 180 USPQ 324, In re Spada, 15 USPQ2d 1655, In re Fitzgerald, 205 USPQ 594, and MPEP 2113.

Where the examiner has found a substantially similar product as in the applied prior art the burden of proof is shifted to the applicant to establish that their product is patentably distinct, see In re Best, 195 USPQ 430.

Applicant's arguments filed April 30, 2003 have been fully considered but they are not

persuasive.

Applicant states that Bruno teaches particles having a surface area of 0.1 to 10.8 m²/g in Table 1.

However claim 1 and col. 2, line 59 teach a surface area of less than 50 m²/g which overlaps that instantly claimed.

Applicant states that Menashi teaches particles with surface areas of 5.7 to 16.4 m²/g in Table II.

However Table IX teaches a surface area of 83.7 which is within that instantly claimed.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
